Intellectual Property Rights (IPR)

IPR refers to legal protections granted to creators for their original work. In digital marketing, IPR protects:

- Logos, taglines, brand names
- Articles, blogs, website content
- Images, graphics, videos, animations
- Music, designs, software code
- Advertisements and scripts

Types of IPR Relevant to Digital Marketing

- **Copyright** – Protects creative content.
- **Trademark** – Protects brand identity (logos, slogans).
- **Patent (less common here)** – Protects inventions and processes.

IT Act 2000 and Its Role

The **Information Technology Act 2000** governs electronic communication and online behavior in India. It protects digital content and users by:

- Defining cybercrimes and penalties
- Handling online copyright violations
- Regulating digital signatures and e-documents
- Protecting website data and user information
- Governing electronic contracts
- Penalizing misuse of digital content, hacking, identity theft, and online fraud

Risks in Digital Content Use

Using online content carelessly can lead to major legal, ethical, and financial problems.

Common Risks

1. **Plagiarism**
 - Copying content (text, images, videos) without permission.
2. **Copyright Infringement**
 - Using branded or protected content illegally.

Copywriting helps brands communicate through creative and persuasive messages, while IPR and the IT Act 2000 ensure legal protection of this content. Understanding copy styles, copyright rules, and risks in digital content use prevents plagiarism, avoids legal issues, and maintains ethical standards in digital marketing.
